February 8, 2024

1 Context

1.1 Introduction

- US Airways Flight 1549 had two interesting points in the investigation https://en.wikipedia.org/wiki/US_Airways_Flight_1549
 1. Checklist in the QRH for ditching was in a poor order, i.e. ditch button was one of the last options
 2. NTSB tried to use simulators, where they tested the simulator with immediate reactions - which were deemed as unrealistic
- Reasons for project
 - Order is important, especially for time sensitive situations
 - Seeing what the action of forgetting a step could result in - Checklist Manifesto intro

1.2 Key Background Sources

Resource	Info
US Airways 1549 NTSB Investigation [1]	Description: An investigation on an aircraft that suffered from a dual engine failure from a bird strike forcing the pilots to land on the Hudson River. Reason: The investigation found that the QRH was too lengthy and the pilots' used their experience to prioritize essential actions outside the QRH to keep the aircraft in control.

2 Aim and Objectives

3 Planning

3.1 Diagrammatic Work Plan

3.2 Brief Explanation

3.3 Risks

4 Ethics

4.1 Ethics Checklist

My project:

1. Will *not* involve working with **animals** or users/staff/premises of the **NHS**
2. Will be carried out **within the UK or European Economic Area**
3. Will *not* have any impact on the **environment**
4. Will *not* work with populations who do *not* have **capacity to consent**
5. Will *not* involve work with **human tissues**
6. Will *not* involve work with **vulnerable groups** (Children/Learning disabled/Mental health issues, etc.)
7. Will *not* involve any *potentially* **sensitive topics** (Examples include but are not exclusive to body image; relationships; protected characteristics; sexual behaviours; substance use; political views; distressing images, etc.)
8. Will *not* involve the collection of any identifiable personal data

4.2 Ethical Considerations
